

Proposal of

Square informatix (CRM) software EDCR for

Servier Med Reps activity with doctors

CRM Software is used for mainly doctor call record and setting call frequency, and other activity record related to doctors such as events, CRM generates basic reports that support our analysis. Currently we have approximately 5000 doctor account in Lynx CRM with 150 user accounts.

1. The major need of CRM:

- Organization hierarchy management (Territory, Region, Zone), role creation
- Employee Transfer option within the territory.
- Monthly Visit frequency coverage (A4, A3, A4)
- Dr. Account creation
- Doctor account search in Global account search to create new and add existing
- My Schedule for call Planning, recording & submitting
- DML using My accounts for doctors' information Details (id, Name, Specialty, frequency, address, contact)
- Tour Plan (TP) to create monthly doctor visit & call plan
- Calendar management
- Time off territory (inputting work off hours because of leave, meetings, trainings etc.)
- Monthly Calls Cycle plan M CCP (for targeted doctors within a specific Cycle)
- Product metrics creation to develop doctor adoption and potentiality
- Product Wise Doctor Selection (PWDS)
- Data change request (DCR) to submit to authority
- Medical Events (To create RTM, Camps, FGD and TEM, chemist Campaign and others.)
- Reports (To generate one to one call and accompany reports, medical event reports...)
- Month end report (Total Call, call rate, doctor seen percentage, A3/A4 coverage, event, Adoption & potentiality)
- Customization of reports according to need
- Hierarchy Dashboard management for salesforce activity.

2. Veeva CRM/lynx CRM uses:

- Med Reps able to create and update his own target accounts by himself.
- Able to get a targeted Doctor list and schedule call planning before their visit.
- Lynx local Admin able to share created reports among Salesforce.
- A3, A4 doctor coverage is possible from BI to get regional insight.
- Getting Product wise detailing and their percentage.
- Able to get activity reports from BI showing call rate, call number, events and doctor seen percentage.
- Med reps can extract doctor list in Excel for further analysis.

3. Operational Limitations of Lynx CRM:

- Android based app of Lynx CRM is not available whereas Bangladesh mostly has Android user.
- It's difficult and time consuming to load the URL to run on the phone browser
- Giving data input is difficult while working in android.
- Slow performance while call recording and exploring accounts.
- Too many fields need to be filled during call recording that seems hassle for Med Reps.

4. Technical Limitations of Lynx CRM:

- Target accounts and MC Cycle plan need to update through TCS which sometimes get longer time that depends on data volume.
- While editing doctors accounts information it raises data change request and wait until approval.
- There is no automation between MCCP and target accounts update, always we need to update manually.
- There is a column limitation in My accounts view so we cannot fill all needed information in one view.
- Unable to create complex reports in Lynx CRM rather dependent on BI.
- Historic PDP data is not visible in the accounts view with current data.

5. Square informatix CRM functionality:

- Cloud based SAAS application that will give us a freedom of usage and administration.
- Android based cloud SAAS application can be installed from play store and activity will be recorded over the application.
- Location tracking is possible in the CRM.
- The application can be customized anytime as per our requirements
- We will be able to add any further module with less effort.
- Not dependable on the third party for its update and maintenance.
- As it hosted from local data center it provides better performance.
- Administrator can have full access through browser and android apps to create and modify contents.

6. Square informatix Local CRM feature:

- Organization hierarchy management (Territory, Region, Zone)
- Tour Plan (TP)
- Call Planning scheduler
- Doctor Visit Register (DVR)
- Product Wise Doctor Selection (PWDS)
- Doctor Investment management
- Doctor master list (DML) with all other needed attributes
- Product wise PDP and potentiality list for each hierarchy.
- Monthly Visit frequency coverage (A4, A3, ...)
- Work Plan (WP)
- Doctor Call Register (DCR)
- Month end report (Total Call, call rate, doctor seen percentage, A3/A4 coverage...)
- Employee Transfer option within the territory.
- Dashboard management to get insight of salesforce activity.

7. Reasons for switching into Square informatix CRM:

- Fit within our budget and provide an acceptable ROI
- We are not getting full efficiency of Lynx CRM App as there is no android version of that App.
- Provide accurate, consistent data that is needed for us.
- Very user-friendly UI interface.
- Increase Customer Service
- Save Time for promoting products
- Motivating Doctor's commitment
- Helps in improving our overall business
- Real-time management of doctor visiting information
- Deployment and maintenance price is very low.

8. Things to keep in mind:

- Data upload convenience.
- Data Link up with data hub and Power BI to generate report.
